

ATTACHMENT 7

WINTER FEEDING DEMONSTRATION

Attachment 7:

Vegetative regrowth following livestock removal from winter pastures is monitored with repeat photography. Figures 1a and 2a below illustrate vegetative conditions near stationary feeders in the spring. Photographs repeated in the fall are shown in Figures 1b and 2b and illustrate vegetative regrowth following dry summer growing conditions. On the next page Figures 3a and 4a illustrate vegetative conditions where hay was feed over larger areas. Figures 3b and 4b are repeat photos of the same site taken in the fall.

Figure 1a. Stationery grain feeding area photographed Spring 2000.

Figure 1b. Feeding area revisited Fall 2000.

Figure 2a. Stationery hay feeding area photographed Spring 2000.

Figure 2b. Feeding area revisited Fall 2000.

Attachment 7 continued:

Figure 3a. Spring 2000 winter hay feeding area.

Figure 3b. Winter hay feeding area revisited Fall 2000.

Figure 4a. Spring 2000 haying area.

Figure 4b. Haying area revisited Fall 2000.
